\*1 The scanning speed differs depending on the host computer, the operating system, the application, the measuring method, the quantity of data in the image, and the paper type. The scanning speed depends on a measuring method of Panasonic.

\*2 "Weight in pounds" of paper represents the weight of 500 sheets (432 x 559 mm / 17 x 22 in.). Scan quality cannot be guaranteed for documents with a non-standard size.

\*3 Dimensions and weights are approximate.

\*4 Availability of the model may differ depending on the country.

## ToughFeed

### Innovative Paper Feed Mechanism

#### Stapled Document Detection

##### Preventing Damage to the Scanning Glass

Multiple sensors are used to detect various types of stapled documents, and to immediately stop the scanner when stapling is detected. This minimises damage to both the document and the optical glass.

#### Ultrasonic Double-Feed Detection

##### Accurate Scanning

The KV-S5076H is equipped with an ultrasonic sensor, which accurately detects double-feeding even when scanning documents of various thicknesses. When detected, the ultrasonic sensor prevents double-feeding by immediately stopping the scanning process.

#### Superior Roller Mechanisms

##### Precise Feeding

The paper feed rollers separate from the paper each time a sheet is fed, so the tendency to double-feed caused by the paper feed roller pressure is reduced, even when feeding paper of different thicknesses. Any paper sliding is also detected and the double feed prevention roller pressure is adjusted to prevent the paper from slipping and jamming.

#### Mechanical Deskew\*

Physical paper skewing is reduced by the integrated Mechanical Deskew system. Even when skewed documents are fed into the scanner, the Mechanical Deskew system physically adjusts the paper before the paper is scanned by the CIS (Contact Image Sensor).

\* There is a limit to the skewing correction. Skewing reduction is effective for documents that are skewed up to approximately 5 degrees.

#### Paper Ejection Control

The paper exit roller reduces the speed of the paper being ejected and aligns the paper to prevent paper jams or the loss of originals.

#### Ionizer

The ion-filled breeze created by the ionizer neutralises the electrical charge on the documents to be scanned, and reduces the amount of paper dust that clings to their surface. This ion-filled breeze also flows through the paper path and removes paper dust from the scanning glass to reduce the need for the user to clean the glass.

#### Scanning Glass Cleaning Brush

The brush directly cleans the scanning glass to further prevent paper dust. This eliminates the need for maintenance and ensures comfortable scanning operations.

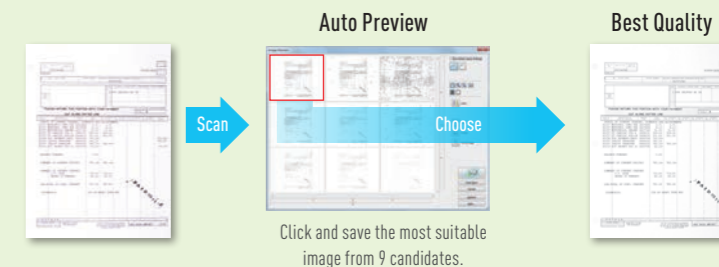

## Three Labor-Saving Functions for Better Work Efficiency

### Auto Preview

#### - No More Need for Troublesome Scan Settings

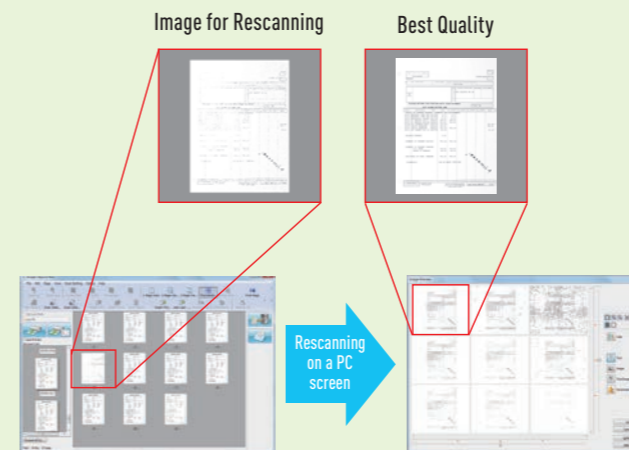

Auto Preview automatically adjusts scanned data, produces nine candidate types, and shows them in a list format. The user can select the most suitable image with a single click, and make further adjustments if desired. This eliminates the time and trouble of trial-and-error operation, and quickly and easily produces electronic documents that are clearly legible and uniform.

### Auto Rescan

#### - Efficient Rescanning of Various Originals

When the scanned image is poor, using Auto Rescan, you can adjust the image on a PC screen without rescanning the original document. This saves both time and trouble.

### Notification Functions

#### - Detection of troublesome problem

Images uses four notification functions to save work. Icons for all four are displayed on-screen for speedy confirmation and additional setting.

#### Binary / Colour Notification

When the amount of coloured space is close to the Automatic Binary / Colour Distinction judgment value.

#### Binary Image Notification

When there is another recommended setting.

#### Blank Image Notification

When the amount of blank space is close to the Blank Page Removal judgment value.

#### Unique Page Notification

When mixed with different kinds of documents.

## Beautiful Results Every Time with Automatic Background and Edge Adjustment

### Automatic Deskew

Because cropping and deskewing are possible even with a white background, thin documents through which black backgrounds are visible can be deskewed as white backgrounds.

### Border Removal

You can achieve a natural scanning in a variety of document by adding the Border Removal function. This feature has the following three function.

#### By Surrounding Colour

#### By White Colour

#### By Background Colour
